

# Sit back and relax

**Crescent Lighting supply floating chandeliers for a bathroom in a Central London Penthouse.**

Residence Interior Design have transformed a multimillion pound penthouse in central London which covers 5000 square feet and has magnificent views of the Thames and The Houses of Parliament.

There is an open-plan guest room which has three fibre optic chandeliers suspended above a freestanding bath tub. Crescent Lighting specified and supplied 'Laluna' fibre optic chandeliers.

"With the guest room it was essential to create a 'wow factor' so with the large volume of space I needed to incorporate some lighting in the centre of the room that had a relationship with the bath," explained Stephen Dick of Residence Interior Design. "This is just not possible with conventional lighting because of the building regulations and associated dangers, and in this case, 4.5 metre high ceilings. This is when I realised a fibre-optic lighting design would be the solution."

Discreetly installed in a void several metres away is one of Crescent's high output tungsten halogen models with an on/off single colour operation. For added visual impact the colour wheel supplied also provides the option of variable colour illumination, specified and is controlled by the owner.

"I had admired Crescent's fibre optic lighting designs at various exhibitions in the past so knew who to call on when this opportunity arose," added Stephen. "As this was the first time I had worked with fibre optics I was very reassured to have Crescent's expertise on hand every step of the way."
